Home Assignment

Academic Year - 2025 - 2026

Name of the Programme & Prog. Code	P131 - B.C.A.(with Credits) - Distance Education - 2016 CGPA - T.Y.B.C.A Semester VI & P131		
Year / Semester	T.Y.B.C.A / Semester VI		
Name of the Course & Course Code	PHP Programming (CMP517)		
Name of the Student	KHAN ARSHIYA BANO FEROZ		
Permanent Registration Number	2023017000841576		
Regional Centre	Y.C.M.OPEN UNIVERSITY REGIONAL CENTER MUMBAI & 3139A		
Mobile Number	9890153790	E-mail ID	nashrak354@gmail.com
Name of the Study Centre & Code	K.M.E SOCIETY'S G.M. MOMIN WOMEN'S COLLEGE, BHIWANDI & 35226		
Date of Submission		No of Pages	10

General Instructions

1	Home assignment is useful for self-analysis of your preparation of the final examination and progress
2	Read all the questions and their marks in the home assignment carefully understand the Definitions and concepts properly
3	Read carefully the text, syllabus and summary related to home assignment.
4	Do not copy the points, matter from the text while writing home assignment mentions your one point /opinions whenever necessary
5	Your answer should include how you would apply the knowledge in real life situations
6	Use A4 size lined papers for writing home assignment by taking printout from this file only
7	Write each new answer on a different page.
8	Printed or typed answers are not allowed
9	The marks of Home assignment and corrective instructions will be sent after checking home assignment
10	Present the Home Assignment by following the instructions and rules. Read carefully all the instructions and rules before any correspondence or communication with the university
	For the programs under NEP 2020 Pattern each theory course of 4 credits its carry 30 marks, there are Two Home Assignments:
11	i) Home Assignment 01 (HA01) is of Twenty marks consisting of 2 Short Answer Questions carrying 5 marks each and 1 Long Answer Question of 10 marks.
	ii) Home Assignment 02 (HA02) is of Ten marks consisting of total 10 Objective Type Questions (MCQ) carrying 1 mark each.
12	For each theory course of 2 credits, there is Only One Home Assignment of Fifteen Marks consisting of 1 Short Answer Question of 5 marks and 1 Long Answer Question of 10 marks.
13	Student have to write the Home assignment 02 (MCQ) on separate page. Home Assignment 02 also to be uploaded along with Home assignment 01.

Q.NO.

Write a short note on cookies.
list the functions for handling cookies.

Browser

Server

Send sign-in request to Server

Send session ID cookie back to browser

Request new page along with session ID cookie

Response: depends on session validity

Definition of Cookies :-

Cookies are small text files that are stored on a user's computer by a web browser when a user visits a website.

They store information such as login details, user preferences, and browsing activity.

Example :-

When a user logs in to a website and the website remembers their username.

Q.NO.

the next time they visit, it is done using cookies.

* Functions for handling cookies :-

In web development, cookies can be handled using different operations like creating, reading, updating and deleting.

① Creating a Cookie :-

The function is used to store data in the browser.

Code: `document.cookie = "username=Noor;
expires=Fri, 31 Dec 2026 12:00 UTC; path="/;`

② Reading a Cookie :-

This function retrieves the stored cookie data.

Code: `let cookies = document.cookie;`

③ Updating a Cookie :-

This function modifies the value of an existing cookie.

Code: `document.cookie = "username=khan;
expires=Fri, 31 Dec 2026 12:00 UTC;
path="/;`

Q.NO.

4) Deleting a Cookie :-

The function removes a cookie by setting its expiry date in the past.

Code: `document.cookie = "username = ; expires = Thu, 01 Jan 1970 00:00:00 UTC ; path = /";`

5) Setting Expiry Time :-

This defines how long a cookie will be stored.

Code: `document.cookie = "theme = dark ; max-age = 604800 ; path = /";`

Q.NO.

Explain Model view controller structure in PHP.

- The Model View Controller (MVC) is a software design pattern used in PHP to organize code into three separate parts.
- It helps in developing applications in a structured, organized, and maintainable way.

- MVC divides the application into :
① Model ② View ③ Controller

• 1 Model

- The Model represents the data and business logic of the application.
- It is responsible for interactive with the database, retrieving data, and processing it.

Study Center Code : 35226

Q.NO.

Example :

Fetching user details from the database.

(2) View :-

- The View is responsible for the presentation layer.
- It displays the data to the user in the form of HTML pages.

Example :

Showing user profile information on a webpage.

(3) Controller :

- The Controller acts as a bridge between Model and View.
- It receives user input, processes it, and decides which Model and View to use.

Example :

Handling a login request and deciding whether to show a success or error page.

Q.NO. Define inheritance? Explain the types of inheritance with suitable examples.

Inheritance is a features of Object-Oriented programming (OOP) in which one class (child / derived class) acquires the properties and methods of another class (parent / base class).

Types of Inheritance

① Single Inheritance

- One child class inherits from one parent class.

Code: <? PHP
 class A {
 function show() {
 echo "Parent";
 }
 }

Study Center Code : 35226

Q.NO.

```
class B extends A {
```

```
}
```

```
$obj = new B();
```

```
$obj->show();
```

```
?>
```

2) Multilevel Inheritance

- A class inherits from another derived class

Code:

```
<?php
```

```
class A {
```

```
function show() {
```

```
echo "A";
```

```
}
```

```
}
```

```
class B extends A {
```

```
}
```

```
class C extends B {
```

```
}
```

```
$obj = new C();
```

```
$obj->show();
```

```
?>
```

3) Idierarchical Inheritance

- Multiple child classes inherit from one parent class.

Course Code: CMP517

Study Center Code : 35226

Q.NO.

```

code: <? php
      class A {
          function show() {
              echo "Parent";
          }
      }

      class B extends A {
      }

      class C extends A {
      }

      $obj1 = new B();
      $obj2 = new C();
      $obj1 -> show();
      $obj2 -> show();    ?>
  
```

4) Multiple Inheritance

- A class implements multiple interfaces.

```

code: <? php      interface A {
                  public function show(); }

                  interface B {
                      public function display(); }
                  class C implements A, B {
                      public function show() {
                          echo "A"; }
                      public function display() {
                          echo "B"; } }    ?>
  
```

5) Hybrid Inheritance

A combination of two or more types of inheritance.

Q.NO.

Q What are the steps for installing Laravel framework?

AIM:

To install and set up Laravel on windows operating system.

Step 1 :- Install XAMPP

Laravel requires a local server to run. We will use XAMPP, which includes Apache, MySQL and PHP.

1) Download XAMPP

Go to the official website:

<https://www.apachefriends.org/index.html>

2) Install XAMPP

- Run the XAMPP installer and following the setup instruction.
- Select Apache, MySQL and PHP components.
- Choose installation location (C:\xampp is recommended)
- Complete the installation and start the XAMPP.

3) Start Apache and MySQL

- Open XAMPP Control panel.
- Click start for Apache and MySQL

Step 2 :- Install Composer

Composer Laravel is used to manage Laravel dependencies.

Q.NO.

① Install Laravel

- Open command prompt.
- Navigate to htdocs folder:
`cd C:\xampp\htdocs`
- Run the command to install Laravel:
`composer create-project laravel/laravel projectname`
- Laravel will be downloaded and install

Configure Laravel

- Navigate to project folder:
`cd projectname`
- Copy `.env.example` to `.env` file.
- Set database details in `.env` file:
`DB_DATABASE`, `DB_USERNAME`, `DB_PASSWORD`
- Generate application key:
`php artisan key:generate`

Create Database

- Open browser and go to :
<https://localhost/phpmyadmin>
- Create a new database & same name as in `.env` file

Run Laravel Application

- Run the command :
`php artisan serve`
- Open in browser :
`http://127.0.0.1:8000`
- Laravel application will run successfully.
